UPSCALE RESTROOM PARTITIONS

DURABLE • TEXTURED • UNIQUE • UPSCALE

AVAILABLE CONFIGURATIONS

FP-500 Corinthian – Overhead-Braced

Created for areas where high strength is required and installation considerations prevent other toilet partition options. Headrail is used for additional strength.

FT-700 Luxor – Floor Mounted

Floor mounted structure is ideal for restrooms with concrete floors. It provides a consistent appearance across the top of panels and pilasters for a modern look. Headrail is not required.

CH-700 Forum – Ceiling Hung

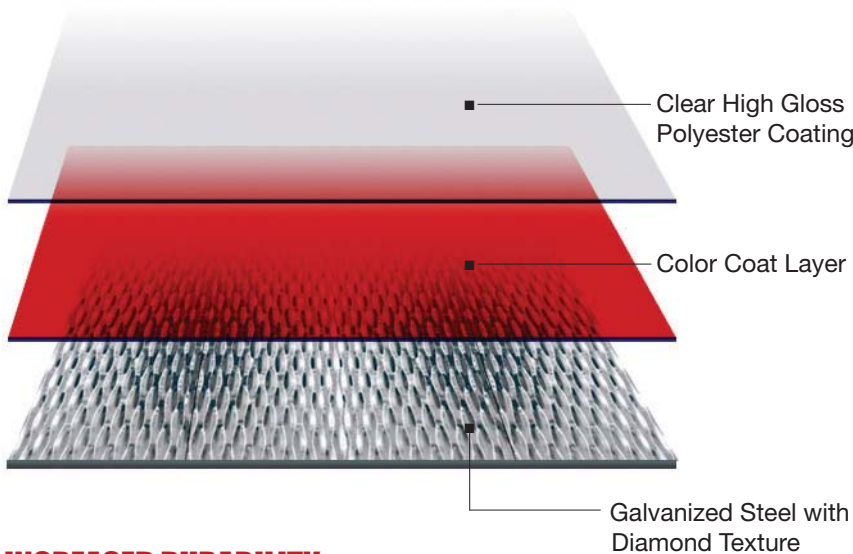

This style provides for unobstructed floor space beneath the stalls. Floor to ceiling pilasters can be added to provide maximum strength and durability.

FT-700E Dorian – Floor Mounted, Privacy Style

Provides the ultimate in personal privacy. This style provides complete head-to-toe coverage, which meets all standards required by Eastern and Middle Eastern cultures.

The **Dur-A-Tex™** line of partitions is a highly durable, value added, textured surface steel partition. A proprietary two-coat paint process developed by Metpar on galvanized steel increases the durability, plus improves resistance to graffiti and corrosion. This process vastly improves the service life of the product. The textured surface of Dur-A-Tex™ gives a rich, upscale appearance to the décor of all environments and applications.

INCREASED DURABILITY

- A special two-coat paint process increases durability
- Corrosion resistance is 2X greater than other standard powder finishes
- Texture pattern improves the strength of partition surface and damage resistance

UNIQUE APPEARANCE

- Color surface with diamond texture
- Wide range of standard and custom colors
- Our Nickel Silver closely imitates the appearance of Stainless Steel

EXTREME GRAFFITI RESISTANCE

- Texture surface prevents graffiti vandalism
- Permanent marker or spray paint can be removed without damage to the surface
- High gloss coating reduces clean up time

Scan the QR code for a demonstration of the graffiti resistance.

SOLVING THE CHALLENGE

In decades past, partitions were fabricated with standard cold rolled steel and a liquid enamel paint finish, which was subject to eventual rusting and damage as a result of graffiti. Dur-A-Tex™ addresses both these shortcomings by using pre-coated galvanized steel and powder-coated finishes, which is the state of the art in rust prevention and durability. Both of these materials extend the longevity and visual appeal of steel partitions, improving their overall appearance and functionality as well as their return on investment.

IMPACT ON DESIGN

Apart from basic durability, an important concern for many property owners, architects and designers is the ambient feel of any room fixture, including restroom partitions. Dur-A-Tex™ creates an upscale feeling with a textured finish, which is embossed into the steel prior to finishing. The wide range of standard and custom colors available fulfills the most demanding design criteria.

DURABILITY

Dur-A-Tex™ has a graffiti-resistant coating applied at high temperatures that prevents damage due to vandalism and extends the life of the product by preventing corrosion. Salt Spray tests on Dur-A-Tex™ per ASTM B117 has shown no failure of the paint film at 1200 hours while the finish on standard partitions in the marketplace today show corrosion and blistering of the finish at only 300 to 500 hours.

TOTAL PRIVACY

Extruded Aluminum Privacy Strips

Heavy-duty aluminum privacy strips eliminates any sight gap on either side of the door for maximum privacy. One strip on the latch side acts as a continuous door stop, while the other is positioned between the upper and lower hinge, eliminating any chance of "peeking" into the stalls. These strips can be specified for new construction, or ordered to be applied to existing installations. Contact Metpar sales for more information.
